## P-Booster

### “Ready-to-use” solutions for solid and liquid phosphate fertilizers

In soils Phosphate is quickly precipitated as Calcium-, Iron- or Aluminum-phosphates after P-fertilization. This Phosphate becomes inaccessible for plants.

P-Booster shelters the Phosphate like a protective shield. Subsequently, applied Phosphate remains available for the plant, regardless of soil pH.

#### Standard Concentrations:

40-41% P-Booster

Simple application in a fertilizer mixing system (batch blender, continuous mixer or screw conveyer) or add directly to liquid fertilizers.

For granulated, crystalline, and liquid Fertilizers such as DAP, MAP, 20-20, 40-13 and Slurry

## Benefits

- ✓ Convenient liquid formulation for all common Phosphate fertilizers
- ✓ Reduced Phosphate precipitation by Ca, Fe or Al
- ✓ Increases Phosphate availability of organic fertilizers such as Slurry
- ✓ Fertilizer synergist for better uptake of macro and micronutrients

**Packing: 20l / 200 l / 1000l**
